Abstracts

Spherical cellulose beads are biodegradable microspheres derived from cellulose, a natural and renewable polymer typically sourced from plant fibers. These beads are characterized by their spherical shape and are widely recognized for their eco-friendly properties, serving as a sustainable alternative to conventional microbeads that may contribute to environmental pollution. The production process involves transforming cellulose into spherical particles, resulting in a versatile material with applications in various industries. Spherical cellulose beads find use in cosmetics, personal care products, and industrial processes where their biodegradability and renewable origin are valued. In cosmetic formulations, they are often employed as gentle exfoliants, providing a smooth texture without the environmental concerns associated with synthetic microbeads. As global awareness of sustainability grows, the demand for spherical cellulose beads is expected to increase, driven by a shift toward environmentally conscious practices and regulatory measures aimed at reducing the use of non-biodegradable microplastics.

The global Spherical Cellulose Bead market size was estimated at USD 74.3 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.70% during the forecast period.
