Abstracts

Spherical chromium powder is a metallic powder characterized by its high degree of sphericity, uniform particle size distribution, and high purity, primarily composed of elemental chromium. It is typically produced through atomization processes, such as plasma or gas atomization, which result in spherical particles that exhibit excellent flowability, high packing density, and superior sintering behavior. This form of chromium powder is critical in advanced manufacturing applications, including additive manufacturing (e.g., 3D printing), thermal spray coatings, metal injection molding (MIM), and the production of specialized alloys, where its spherical morphology ensures consistent performance, reduced porosity, and enhanced mechanical properties in final components.

The global Spherical Chromium Powder market size was estimated at USD 26.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
