## Abstracts

A spherical microphone array refers to an array structure that is approximately spherical and is formed by arranging multiple microphones in a spherical layout. This array can fully capture sound signals from all directions in three-dimensional space and achieve complete measurement of the three-dimensional sound field. The spherical microphone array uses the sound signals captured by each microphone and uses signal processing techniques such as spherical harmonic function beamforming algorithms to calculate the position distribution and intensity information of the spatial sound source. This array can achieve complete measurement of the three-dimensional sound field and generate sound source cloud map results, providing valuable experimental basis for indoor noise control, etc.

The global Spherical Microphone Array market size was estimated at USD 638.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
