Abstracts

Spherical Rubber Core Annular BOP is a type of annular BOP. It is a well control device with a hemispherical annular rubber core as the key well sealing component. It has a "short and fat" shape with a slightly lower height and a slightly larger diameter. It is also heavier and has the advantages of good sealing effect and long service life. The spherical rubber core annular BOP is mainly composed of top cover, shell, piston, rubber core, dust ring, seal and other parts. The spherical rubber core is deformed by compressing it, thereby generating resistance to achieve flow control and stability. In drilling operations, spherical rubber core annular BOP is widely used in various occasions where wellhead pressure needs to be controlled and formation fluid intrusion prevented. It can not only seal the wellhead, but also provide effective sealing protection during drilling, milling, sleeve grinding, logging and salvaging of well drops.

The global Spherical Rubber Core Annular BOP market size was estimated at USD 964.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
