Report Overview

Spherical silicone resin powder is a silicone based polymer that is used as a skin conditioning agent and surface modifier in beauty products, cosmetics, and skin creams. It is primarily used to create a film or barrier for makeup to stick to. This barrier prevents sweat and oils from coming through underneath which would normally cause makeup to wear off. Methicone and all silicone polymers, have a large molecular weight; it is unlikely to be absorbed into the skin, helping it to serve as this barrier between the skin and other products, and also preventing it from penetrating the skin itself. The CIR has approved Methicone for use in concentrations up to 15%.
