Abstracts

Spherical tantalum powder is a specialized metallic powder characterized by its uniformly spherical particle morphology, high purity, and excellent flowability, primarily produced through processes such as plasma atomization or electron beam melting. It serves as a critical raw material in the manufacturing of porous anodes for solid electrolytic capacitors, where its high surface area, sintering behavior, and electrical properties enable enhanced capacitance and reliability in miniaturized electronic components. Additionally, its biocompatibility and corrosion resistance make it suitable for biomedical implants, particularly in orthopedic and dental applications, while its use in additive manufacturing and high-performance coatings is emerging due to its ability to form dense, defect-free structures. The powder's specifications—including particle size distribution, oxygen content, and tap density—are tightly controlled to meet stringent industry requirements, positioning it as a high-value material in advanced technology sectors.

The global Spherical Tantalum Powder market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
