## Abstracts

Tungsten-rhenium alloy powder is an alloy powder made by adding metal rhenium (Re) elements to refractory metal tungsten (W) as the matrix through a specific process. An appropriate amount of rhenium can be dissolved in tungsten to form a solid solution alloy powder, which has a series of excellent properties of tungsten and rhenium, such as high melting point, high strength and hardness, corrosion resistance and wear resistance. This report focuses on spherical tungsten-rhenium alloy powder. The appearance of spherical tungsten-rhenium alloy powder is spherical or nearly spherical. This shape makes the powder have a smaller surface roughness and powder flow resistance, which is conducive to improving the filling and dispersibility of the powder, and improving its uniformity and stability during the preparation process.

The global Spherical Tungsten Rhenium Alloy Powder market size was estimated at USD 363.2 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
