Abstracts

NOR is a non-volatile storage technology meaning that it doesn't require power to retain data. NOR flash memory is characterized by fast random access times, which typically allow it to read relatively small amounts of data from any address quickly. Serial NOR Flash typically uses the Serial Peripheral Interface (SPI) protocol to interface with the memory controller. To achieve higher throughput, dual SPI and quad SPI interfaces are available. NOR Flash is widely used in automotive electronics, such as ADAS systems, in-car entertainment systems, intelligent driving systems and navigation systems. Automotive electronics has extremely high requirements for the capacity, life and reliability of NOR Flash. The service life is more than 10 years, and the working environment temperature can reach -40?~125?. The global production of SPI NOR Flash for cars is mainly distributed in North America, Europe, China and Japan. Among them, the market share of the top three production regions is close to 80%, and China is currently the largest production region.

The global SPI NOR Flash for Cars market size was estimated at USD 664.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.20% during the forecast period.
