Abstracts

A Spin Torque Diode (STD) is a nanoscale spintronic device that converts microwave-frequency alternating current into direct current voltage through the phenomenon of spin-transfer torque, where spin-polarized electrons exert a torque on the magnetization of a ferromagnetic layer, enabling frequency-selective rectification without the need for an external magnetic bias in certain configurations. It typically consists of a magnetic tunnel junction or spin valve structure and operates based on the interaction between spin-polarized currents and magnetic moments, making it a key component for applications such as microwave detectors, frequency generators, and energy harvesters in next-generation computing and communication systems.

The global Spin Torque Diode (Std) market size was estimated at USD 125.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.50% during the forecast period.
