Abstracts

Spin-Transfer Torque Magneto Resistive RAM (STT-MRAM) (also called STT-RAM or sometimes ST-MRAM and ST-RAM) is an advanced type of MRAM devices. STT-MRAM enables higher densities, low power consumption and reduced cost compared to regular (so-called Toggle MRAM) devices. The main advantage of STT-MRAM over Toggle MRAM is the ability to scale the STT-MRAM chips to achieve higher densities at a lower cost. STT-MRAM has the potential to become a leading storage technology as it is a high-performance memory (can challenge DRAM and SRAM) that can scale well below 10nm and challenge the low cost of flash memory. The need for low-cost, small-size, power-efficient random-access memory technology grew in the past decade in industrial, commercial, automotive, and defense systems due to the rapid implementation of computers. MRAMs can withstand high radiation, operate in extreme temperature conditions, and are tamper-resistant, making them fit for military and industrial applications. Increasing adoption of digitalization across the industry, technological advancement of computing technologies, Internet of Things (IoT) and rapid development of smart robots across the world, and rising investment in electronic devices such as smartphones, televisions, smart wearables, computers, and drones, may boost the market demand in the future.

The global Spin-Transfer Torque Magneto Resistive RAM (STT-MRAM) market size was estimated at USD 962.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.00% during the forecast period.
