## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Spin Welding Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A Spin Welding Machine is a specialized equipment for joining thermoplastic parts through frictional heat, where kinetic energy from high-speed rotation generates interfacial melting followed by molecular bonding under pressure. Key systems comprise rotary drives, precision pressure controls, and temperature monitoring, tailored for axisymmetric components (e.g., pipe fittings, container lids). The process eliminates consumables or external heating, yielding near-parent-material weld strength without emissions. Classified into continuous rotation and inertia friction variants, it serves hermetic assembly needs in automotive, medical device, and packaging industries. As a critical equipment for thermoplastic welding, the evolution of spin welding technology reflects the precision demands of advanced manufacturing. The industry is undergoing dual structural shifts: stringent requirements for hermeticity and weld strength in sectors like new energy vehicles and medical devices are driving continuous process refinement, while Industry 4.0 transformation is redefining equipment standards with smart control systems and production line integration emerging as key differentiators. The market exhibits distinct technological stratification, where leaders consolidate advantages through breakthroughs in materials science and motion control algorithms, while smaller players face pressure to specialize. While emerging applications may reshape the competitive landscape in the long term, the near-term trajectory will likely remain characterized by technology-intensive development.

The global Spin Welding Machine market size was estimated at USD 817.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30%

during the forecast period.
