Report Overview

Spindle Increaseers are designed and developed to elevate the standard machine spindle RPM's by typically a factor of 3 to 5 depending on the gear ratio. All this while ensuring maximum reliability and precision in CNC drilling and light milling operations, particularly in finishing operations. An example of this is by maintaining a 3000 RPM on your machine you can achieve 9,000 – 15,000 RPM using a spindle speeder. A spindle increaser can be easily loaded into the spindle or the tool magazine manually and performing an ATC (automatic tool change) can be obtained smoothly. Manufacturers use these devices to run small tools and high rpms on machines that are otherwise incapable of either.
