Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Spinel Pigments competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of Spinel pigments reached approximately 55,000 kilotons, with an average global market price of around USD 6,300 per kiloton. Spinel pigments are a class of inorganic colorants based on the crystalline spinel structure (AB₂O₄), where divalent and trivalent metal cations occupy specific lattice sites, producing stable and vibrant colors. By substituting different metal ions such as cobalt, chromium, iron, zinc, nickel, or manganese into the spinel lattice, a wide range of shades can be achieved, including blues, greens, browns, and blacks. Known for their high thermal stability, chemical resistance, and excellent weathering properties, spinel pigments are widely used in ceramics, coatings, plastics, and inks, where long-lasting and non-toxic color performance is required.

The global Spinel Pigments market size was estimated at USD 347.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
