Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Spinning Reels competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Spinning reels are the core type of fishing reel used for reeling and releasing fishing line. They are named for their "spinning wheel"-like horizontal arrangement of the spools, which remain fixed during reeling (the line is evenly wound by the guide wire). They are widely compatible with various fishing rods, including sea fishing rods, lure fishing rods, and rock fishing rods, making them one of the most popular reels among anglers worldwide. In 2024, global spinning reel production reached 9.9173 million units, with a production capacity of approximately 12 million units. The average selling price was US\$55 per unit, resulting in a gross profit margin of approximately 33.45%.

The global Spinning Reels market size was estimated at USD 545.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.90% during the forecast period.
