The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Spiral Blade Forming Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of spiral blade forming machines reached 46,000 units, with an average selling price of \$14,800 per unit. These machines are automated cold/hot forming equipment used to produce conveyor blades, agitator blades, and auger blades. They feature automatic feeding, cutting, shaping, and sizing functions, making them suitable for high-precision processing of carbon steel, stainless steel, alloy steel, and wear-resistant steel plates. They are widely used in agricultural machinery, mining transportation, building materials, chemical engineering, and environmental protection equipment manufacturing. Key upstream raw materials include alloy steel plates, hydraulic systems, CNC units, and servo motors. Representative suppliers include ArcelorMittal, Bosch Rexroth, FANUC, and ABB. Global production capacity is approximately 51,000 units per year, with an average industry gross profit margin of 22%-28%. Downstream consumption is driven by mining and building materials equipment manufacturing, accounting for approximately 40%, agricultural machinery for 25%, and the remainder for chemical and energy equipment. Steel and hydraulic systems account for approximately 63% of the total manufacturing cost. In the future, the equipment will develop towards intelligent control, automatic mold changing and high-strength steel forming to meet the needs of efficient manufacturing and green production.

The global Spiral Blade Forming Machine market size was estimated at USD 681.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
