Abstracts

Spiral Microbubble Exhaust Valve is a valve device designed for efficient removal of tiny bubbles in liquid systems. It uses a unique spiral mesh structure to optimize the bubble separation process. The internal spiral mesh structure changes the flow path of the fluid and reduces the flow rate, giving the bubbles more time to separate from the liquid. It is particularly suitable for fluid environments with high bubble concentrations or very small bubbles. The valve can provide efficient bubble removal while maintaining low fluid pressure loss. It is widely used in boiler steam systems, cooling systems and other occasions that require efficient exhaust, effectively improving the operating efficiency and stability of the system.

The global Spiral Microbubble Exhaust Valves market size was estimated at USD 887.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
