Report Overview:

Nanofiltration membrane interception molecular weight between reverse osmosis membrane and ultrafiltration membrane, about 200-800 Dalton. Rejection characteristics: bivalent and polyvalent anions are preferentially blocked, and the rejection rate of monovalent ions is related to the concentration and composition of the feed liquid. Nanofiltration is generally used to remove organic matter and pigment in surface water, hardness in groundwater and partially remove dissolved salt, and is used for material extraction and concentration in food and biomedical production. The operating pressure of nanofiltration membrane is generally 3.5-30bar.
