Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Split Surface DTH Drilling Rig competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.The split surface DTH drilling rig is a high-efficiency drilling equipment specially used in open-pit mines, stonework projects, foundation construction and other scenarios. It is a type of down-the-hole drill. Its biggest feature is that the power part is separated from the walking/drilling part, usually consisting of an air compressor, a power unit, a control system and a drilling rig body. This structure gives the equipment better flexibility and maneuverability, and is particularly suitable for working environments with complex terrain and intensive drilling. The split surface DTH drilling rig drives the down-the-hole hammer through high-pressure air to achieve efficient drilling in the rock, and the drilling diameter is usually between 90mm and 165mm. Compared with the integrated model, the split equipment is easy to maintain, the parts are quickly replaced, and the air compressor can be used independently to improve the utilization rate of the equipment. It is widely used in modern mining, construction blasting front hole drilling and other fields, and is an ideal choice for medium to heavy-duty drilling tasks. Some high-end models also integrate intelligent functions such as GPS positioning, remote control, and fuel consumption monitoring to improve work efficiency and safety.

The global Split Surface DTH Drilling Rig market size was estimated at USD 437.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.30% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Split Surface
