Split testing solutions, also known as A/B testing or multivariate testing platforms, are software tools that enable organizations to systematically test variations of digital assets?such as web pages, emails, advertisements, or user interfaces?against one another to determine which version performs best according to predefined metrics like conversion rates, click-through rates, or engagement levels. These solutions typically include features for experiment design, audience segmentation, statistical analysis, and performance reporting, allowing businesses to make data-driven decisions that optimize user experience and maximize key performance indicators.
