Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Spoke Type Load Cell competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of spoke-type load cells reached 6.7 million units, with an average selling price of \$52 per unit. Spoke-type load cells are precision sensors that use a radially shaped elastomer structure to measure pressure or weight. They feature a high measurement range, excellent stability, and strong resistance to off-center loads. They are widely used in applications such as silo scales, floor scales, pressure testing systems, and industrial weighing platforms. The main upstream raw materials include high-strength alloy steel, stainless steel, strain gauges, wires, resistors, and sealants. Major suppliers include Vishay, HBM, Zemic, Gemstone Electronics, Keli Sensor, and TE Connectivity. Downstream customers include industrial automation equipment manufacturers, logistics weighing system companies, and users in the grain, chemical, and metallurgical industries, such as Siemens, Schenck, Cardinal, and Zhongke Yingtai. Global production capacity is approximately 7.2 million units per year, with an average industry gross profit margin of approximately 27%. Downstream consumption is comprised of approximately 40% for industrial weighing equipment, 25% for logistics and warehousing weighing systems, and 20% for process control and testing applications. Metal elastomers and strain gauges account for approximately 55% of upstream material costs. The future market is expected to develop towards high-precision digitalization, wireless communication integration, and explosion-proof environment applications.

The global Spoke Type Load Cell market size was estimated at USD 348.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20%

during the forecast period.
