Abstracts

A sport support stabilizer is a specialized orthopedic device designed to provide targeted compression, support, and stabilization to joints and muscles during athletic activities or recovery from injuries, typically constructed from elastic materials such as neoprene, spandex, or breathable mesh, often incorporating adjustable straps, rigid stays, or silicone grips to enhance fit and function; it is engineered to limit excessive or harmful ranges of motion, reduce strain, manage swelling, and improve proprioception, making it distinct from basic braces or sleeves due to its emphasis on active stabilization and injury prevention rather than mere warmth or mild support.
