Report Overview

Sports composites are novel materials comprising mixtures of fibers. In sports composites, fibers are reinforced and are used to fortify the matrix in terms of strength and stiffness. These are used for manufacturing sports goods such as golf club, golf sticks, skis & snowboards, hockey sticks, rackets, fishing rods, and bicycles, among others. The use of composites in the sporting & recreation applications increases performance because they provide density and stiffness to sports goods which other traditional metals cannot provide.
