Abstracts

Spouted pouch equipment refers to specialized machinery and automated systems designed for the manufacturing, filling, and sealing of flexible packaging known as spouted pouches?stand-up bags with integrated dispensing closures, often used for liquid, semi-liquid, or viscous products. These systems typically include pouch forming units that create the pouch structure from roll-fed laminates, spout insertion mechanisms that accurately place and secure the fitment, filling stations that dose product into the formed pouch, and sealing units that hermetically close the package to ensure shelf stability and leak resistance. Advanced models may integrate robotics, vision inspection systems, and programmable logic controllers (PLCs) for high-speed, precision operations across industries such as food and beverage, pharmaceuticals, personal care, and household chemicals, where convenience, sustainability, and extended product freshness are key drivers.

The global Spouted Pouch Equipment market size was estimated at USD 168.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
