Report Overview

Spray-dried goat milk powder is a dairy product created by evaporating the liquid from fresh goat milk and then spray-drying the concentrated milk into a fine, shelf-stable powder. This process preserves the nutritional profile of goat milk, including its high levels of protein, calcium, and vitamins A and D, while extending its shelf life and making it easier to transport and store. The powder is often reconstituted with water or used as an ingredient in infant formula, nutritional supplements, baked goods, and dairy alternatives, catering to consumers seeking lactose-intolerant-friendly or A2 milk-based products. Its production involves specialized equipment to maintain quality, with key factors including fat content, solubility, and absence of additives influencing market positioning. Demand is driven by health-conscious consumers, parents preferring goat milk formula for infants, and the growing popularity of functional foods, particularly in regions with strong dairy traditions or rising disposable incomes.
