This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Spray Pretreatment Tunnel competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A spray pretreatment tunnel is a automated surface treatment system designed for cleaning and chemical conversion coating of metal substrates prior to painting. This enclosed tunnel configuration features multiple high-pressure spray zones that sequentially execute processes including degreasing, rinsing, activation, phosphating or passivation through precisely controlled spray patterns. The modular construction accommodates varying production capacities, while integrated circulation filtration and automatic chemical dosing maintain process solution consistency. Workpieces are transported through treatment zones via overhead conveyor or roller system, emerging with uniform chemical conversion coatings that significantly enhance paint adhesion and corrosion resistance. Widely implemented in automated coating lines for automotive and appliance manufacturing.
