Report Overview

Sprayed concrete, also known as shotcrete, is a construction material applied pneumatically at high velocity onto surfaces, forming a dense, durable layer that adheres to various substrates, including soil, rock, and structural frameworks. This technique is widely used in tunneling, mining, slope stabilization, and structural repairs due to its versatility, rapid application, and ability to conform to complex geometries. The process can be executed via dry-mix (where dry ingredients are mixed with water at the nozzle) or wet-mix (pre-mixed concrete pumped through a hose), with the latter gaining prominence for its consistency and reduced rebound. Sprayed concrete enhances structural integrity, provides immediate ground support, and reduces construction time, making it indispensable in modern infrastructure projects, particularly in challenging environments where traditional formwork is impractical.

The global Sprayed Concrete market size was estimated at USD 50427.93 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 11.60% during the forecast period.
