A Spread Mooring System allows a tanker to moor at a fixed location at a fixed heading using its own anchors. While the vessel is in a fixed heading relative to the seabed, its bow typically heads into the dominant environment which is usually the direction where the largest waves are coming from. The mooring lines can be directly attached to the hull of the vessel. Structural modifications are required to provide strong points for the mooring lines.

The global Spread Mooring System market size was estimated at USD 196.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
