Report Overview

Spring Actuated Brake is also known as a 'power-off engaged' brake. A spring actuated electromagnetic brake provides reliable braking when the power is disengaged, and excellent performance in long-term holding applications. In a spring actuated, or spring applied brake, compression springs push the armature plate into the rotor disc to halt and hold movement when power is disengaged. This feature provides fail-safe braking, and allows the brake to maintain position over long periods of time, thus preventing machinery from "coasting" when powered off.
