Report Overview:

A pressure Relief Valve is a safety device designed to protect a pressurized vessel or system during an overpressure event.

An overpressure event refers to any condition which would cause pressure in a vessel or system to increase beyond the specified design pressure or maximum allowable working pressure (MAWP).

The primary purpose of a pressure Relief Valve is protection of life and property by venting fluid from an overpressurized vessel.

The spring-loaded relief valve is a conventional pressure relief valve that is commonly used in liquid service valves. The valve opens proportionally as the pressure increases to overcome the spring pressure.
