## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Sprung Floor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A sprung floor is a type of flooring system engineered with shock - absorbing properties, primarily used in spaces where physical activities take place. The construction typically involves layers that include springs or resilient materials beneath the surface layer. These components enable the floor to flex slightly when pressure is applied, cushioning impacts. In dance studios, for example, a sprung floor is crucial. It helps dancers reduce the stress on their joints during jumps, spins, and quick movements, preventing injuries and allowing for more energetic performances. Gymnasiums also benefit from sprung floors, as they offer support for athletes engaging in activities like basketball, aerobics, and gymnastics. The bounce provided by the floor not only safeguards the well - being of users but also enhances the overall experience, enabling more dynamic and efficient physical exertion. This makes sprung floors an investment in both safety and the quality of physical activity within a variety of settings. In 2024, global Sprung Floor production reached approximately 11,500 K Sqm, with an average global market price of around US\$ 102 per Sqm. The single-line production capacity of Sprung Floor is 530 - 550 K Sqm per year, the average gross profit margin was 22-30% .The supply chain for sprung floors is a vertically integrated network where upstream suppliers provide specialized raw materials (e.g., high-density rubber or dual-density elastomer blocks for shock absorption, sustainably sourced softwood battens, engineered hardwood panels, and recycled materials like coffee grounds) and components (e.g., tongue-and-groove connectors, moisture-resistant membranes, and anti-slip coatings) to midstream manufacturers. These manufacturers design and assemble the floors using modular systems (e.g., basket weave structures, layered plywood, or polyurethane foam) that

comply with safety standards (e.g., EN 14904 for shock absorption, DIN for slip resistance) and incorporate features like energy return and sound insulation. Midstream processes also involve third-party certifications (e.g., FSC for sustainable wood, Ecolabel for low VOC emissions) to meet market demands. Downstream distribution occurs through architectural suppliers, sports equipment retailers, and e-commerce platforms, reaching end-users such as dance studios, schools, gyms, and sports facilities. After-sales services, including installation support and maintenance kits, extend the product lifecycle.

The global Sprung Floor market size was estimated at USD 1173.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
