Abstracts

A spur gear planetary reducer is a planetary reduction device using a spur gear structure, which achieves the functions of deceleration and torque increase through the meshing of multiple gears. Compared with the helical planetary reducer, the spur planetary reducer has a smaller axial force when the gears are meshed, a simpler structure, and a lower manufacturing cost, but it has greater noise and vibration during operation, so it is more suitable for occasions where precision and noise requirements are not high.

The global Spur Gear Planetary Reducer market size was estimated at USD 673.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.10% during the forecast period.
