Abstracts

An SQL in-memory database is a type of purpose-built database that relies primarily on memory for data storage, in contrast to databases that store data on disk or SSDs. In-memory databases are designed to attain minimal response time by eliminating the need to access disks. Because all data is stored and managed exclusively in main memory, it is at risk of being lost upon a process or server failure. In-memory databases can persist data on disks by storing each operation in a log or by taking snapshots.

The global SQL In-Memory Database market size was estimated at USD 7646.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 20.00% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global SQL In-Memory Database market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
