Report Overview

The automatic Assembly line for square electric core refers to the production line for automatic assembly of square electric core. Square cell is a type of battery, usually composed of lithium-ion batteries, with a square or rectangular shape, widely used in various portable electronic devices, electric vehicles, and energy storage systems. The automatic Assembly line for square electric cores uses technologies such as robots, automatic equipment and sensors to realize the automatic production and assembly process of electric cores. The production line usually includes the following main parts: cell shell production: the main steps of producing square cell shells, including stamping, forming, welding, etc. Assembly of positive and negative electrode plates: Assemble the positive and negative electrode plates in a specific way in the cell shell to form the positive and negative electrodes of the battery. Liquid injection and encapsulation: Inject the electrolyte into the cell, and then seal and encapsulate it to ensure that there is no leakage inside the cell. Cell assembly: The assembly of assembled cells into a battery pack, usually consisting of multiple cells in series or parallel. Cell testing and quality inspection: Conduct testing and quality inspection on the assembled cells to ensure that their performance and quality meet the requirements. Packaging and Factory Delivery: Package tested cells and send them to the factory or integrate them into larger battery components. The automatic Assembly line of square cell can improve the efficiency and stability of cell production, reduce manual operation and Personal equation, and ensure the consistency and quality of the cell. This is very important for large-scale production and improving the competitiveness of battery manufacturing. At the same time, the automatic Assembly line can also reduce production costs, improve productivity, and provide strong support for the development of the battery industry.

The global Square Cell Automatic Assembly Line market size was estimated at USD 185.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
