Abstracts

The market for SRAM and ROM design IP (intellectual property) encompasses pre-designed, reusable memory blocks licensed to semiconductor companies for integration into system-on-chip (SoC) designs, application-specific integrated circuits (ASICs), and other custom silicon. SRAM (Static Random Access Memory) IP provides high-speed, volatile storage with low latency, commonly used for cache memory and high-performance computing applications, while ROM (Read-Only Memory) IP offers non-volatile, fixed-data storage utilized for boot code, firmware, and lookup tables. Demand is driven by the proliferation of IoT devices, AI accelerators, automotive electronics, and mobile processors, where optimized memory blocks are critical for balancing power, performance, and area (PPA). Key players include Arm, Synopsys, Cadence, and eMemory, competing on factors like memory density, speed, power efficiency, and compatibility with advanced process nodes (e.g., 5nm, 3nm). The market is characterized by technology licensing models, customization services, and growing emphasis on embedded non-volatile memory (eNVM) variants for security and reliability. Geographically, North America and Asia-Pacific lead in adoption, with foundries and fabless semiconductor companies as primary customers. Challenges include design complexity at smaller nodes, rising development costs, and the need for error-correction and security features, while opportunities lie in emerging applications like edge AI, autonomous vehicles, and heterogeneous integration.

The global Sram And Rom Design Ip market size was estimated at USD 1420.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
