Abstracts

SSE (Security Service Edge) and SASE (Secure Access Service Edge) are modern cloud-based architectures designed to enhance security and connectivity in distributed, cloud-first environments. SSE focuses solely on cloud-delivered security services, including Secure Web Gateway (SWG), Cloud Access Security Broker (CASB), Zero Trust Network Access (ZTNA), and sometimes Firewall-as-a-Service (FWaaS). Its primary goal is to protect users and data without relying on traditional network perimeters. SASE, on the other hand, is a broader framework that combines the security features of SSE with networking capabilities such as Software-Defined Wide Area Network (SD-WAN), WAN optimization, and centralized policy control. While SSE is tailored for organizations seeking robust security for cloud and internet access, SASE is ideal for enterprises needing both secure and optimized connectivity across a wide-area network. The main difference is that SASE includes networking functions, whereas SSE focuses purely on security.

The global SSE and SASE Platform market size was estimated at USD 3845.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.50% during the forecast period.
