Abstracts

Stable compound fertilizer is a new type of compound fertilizer, in which urease inhibitors (or nitrification inhibitors) are added through a special process. After being applied to the soil, it can inhibit the hydrolysis of urea through urease and the nitrification of ammonium nitrogen through nitrification inhibitors, activate the phosphorus element in the soil, improve the utilization rate of nitrogen and phosphorus, and prolong the fertilizer effect, so that one-time fertilization does not require topdressing.

The global Stabilized Fertilizer market size was estimated at USD 663.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.30% during the forecast period.
