Abstracts

In the crypto sphere, stablecoins are introduced to tackle the volatility in price associated with cryptocurrencies like Bitcoin, Ethereum, etc. In simpler terms, Stablecoins are cryptocurrencies whose prices are fixed and attached to real-world currencies or assets. Stablecoins leverage the benefits of both cryptocurrencies (speed, anonymity, and security) and fiat (volatile-free nature). Stablecoins allow easy exchange of digital currencies for fiat cash or real-world commodities and vice versa. Stablecoins, backed by blockchain technology, are the stablest and safest form of cryptocurrencies. Stablecoins tend to become a global currency via decentralization, thus facilitating trustless and cross-border transactions while easing crucial financial transactions. The high liquidity, stable and transparent nature of Stablecoins will create new business verticals like DeFi lending and borrowing, etc., and opens an array of investment opportunities for investors or enterprises. In addition, Stablecoins allows businesses to raise funds seamlessly and transparently by utilizing the advantages of blockchain technology.

The global Stablecoin Development Services market size was estimated at USD 525.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
