Abstracts

A stack multilayer piezo actuator is a specialized electromechanical device that capitalizes on the piezoelectric effect. It is constructed by stacking multiple layers of piezoelectric materials, often ceramic-based, one upon another. When an electrical voltage is applied across these layers, they undergo dimensional changes in a precise and predictable manner, converting electrical energy into mechanical displacement. This actuator is renowned for its ability to generate relatively large forces and small displacements, making it highly suitable for applications demanding high precision positioning and force output in fields like microelectronics manufacturing, precision machinery, and biomedical engineering.

The global Stack Multilayer Piezo Actuator market size was estimated at USD 559.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
