Abstracts

A stack valve is a type of hydraulic valve. Compared with the traditional hydraulic valve, the biggest feature of the stack valve is that the system installation can be achieved without the use of piping, thus reducing the leakage, vibration and noise of the system. Compared to traditional pipe connections, stack valves require no special installation skills and are very easy to change the function of the hydraulic system. Since no piping is required, the overall reliability of the system is enhanced, and routine inspection and maintenance are facilitated.
