Abstracts

Stainless steel bellows are flexible, corrugated metal components designed to absorb thermal expansion, vibration, misalignment, and pressure fluctuations in piping systems, while maintaining a hermetic seal in demanding environments. They are manufactured from high-grade austenitic stainless steels such as 304, 316, or 321, offering excellent corrosion resistance, fatigue life, and performance under extreme temperatures and pressures. These components are engineered to withstand cyclic flexing and mechanical stress, making them critical in applications where rigid connections would fail due to movement or thermal changes. Their design can include single or multiple plies, with or without protective covers or liners, tailored to specific operational requirements such as vacuum conditions, aggressive media, or high purity standards.

The global Stainless Steel Bellows market size was estimated at USD 325.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
