## Abstracts

Stainless steel centrifugal submersible pump is a kind of pump equipment specially designed for underwater operation. It is made of stainless steel and has excellent corrosion resistance and oxidation resistance. It can effectively extract and transport water. Its working principle is based on centrifugal force. The rotating impeller pushes water from the center of the pump to the periphery, generates pressure and transports water to the target location. This kind of pump is usually used in deep well pumping, sewage treatment, agricultural irrigation, municipal water supply, industrial cooling and other fields. It is widely used in places that require high head and large flow.
