## Abstracts

A stainless steel flat washer is a flat, round component made of stainless steel, typically placed under bolts, nuts, or other fasteners to distribute the applied pressure and prevent damage to the material being fastened. It increases the contact area between the fastener and the surface, reducing friction and wear, thereby extending the life of the connection. Stainless steel flat washers possess excellent corrosion resistance, high-temperature tolerance, and high strength, making them ideal for demanding environments, particularly in wet, chemical, or high-temperature conditions. They are commonly used in construction, machinery, automotive, electronics, marine, and aerospace industries, providing reliable fixing and support. By using stainless steel flat washers, the stability and strength of the structure can be significantly improved, especially for applications exposed to harsh environments over extended periods.

The global Stainless Steel Flat Washer market size was estimated at USD 685.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
