Abstracts

Stainless steel ingots are semi-finished metal products cast into standardized shapes, typically rectangular or trapezoidal blocks, which serve as the primary raw material for further processing into various forms such as billets, blooms, slabs, or directly into forged components. Composed primarily of iron with a minimum of 10.5% chromium content along with alloying elements like nickel, molybdenum, and manganese to enhance properties such as corrosion resistance, strength, and heat tolerance these ingots are classified into grades (e.g., 304, 316, 430) based on their specific chemical composition and intended applications across industries including construction, automotive, aerospace, energy, and consumer goods. The production process involves melting scrap metal or raw materials in electric arc furnaces or induction furnaces, followed by refining to achieve desired metallurgical properties and casting into molds, with quality stringently controlled to meet international standards such as ASTM, EN, or JIS.

The global Stainless Steel Ingots market size was estimated at USD 18500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.75% during the forecast period.
