Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Stair Climbing Cane competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of stair climbing canes was approximately 1.5 million to 2.5 million units, with an average selling price of approximately \$20 to \$100 per unit, a gross profit margin of approximately 45%, and a single production line capacity of approximately 45,000 to 75,000 units per year. Stair climbing canes are assistive devices specifically designed to help users maintain balance and stability when ascending and descending stairs. Their biggest difference from traditional canes lies in their base structure—usually not a single fulcrum, but a special base with two or more support points, allowing them to rest stably on stair steps. The upstream mainly consists of raw material and core component suppliers, including lightweight materials such as aluminum alloy/carbon fiber, plastic polymers, and factories responsible for injection molding and joint connector manufacturing. The midstream comprises brand owners and manufacturing assembly plants, which conduct research and development, design, integrated production, and assemble components into the final product. The downstream reaches end users through channels such as medical device distributors, rehabilitation supply stores, online e-commerce platforms, and hospitals/rehabilitation centers. The demand mainly comes from specific groups who need to safely go up and down stairs, including the elderly with weakened balance, patients with osteoarthritis, and postoperative rehabilitation patients. The driving factor is their rigid need to improve their mobility and prevent falls.

The global Stair Climbing Cane market size was estimated at USD 100.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.00% during

the forecast period.
