Abstracts

Stair nosing is the projection in the horizontal direction at the end of the stair. The end part of the stair is the most crucial part as foot traffic is highest at this region of the stair. Stair nosing is used to prevent slipping accidents while using stairs. Stair nosing has a different color than regular stairs, which helps the person using the stairs to identify the end of the stair. For industrial and commercial staircases, stair nosing is mandatory as it prevents accidents, and in some cases, death. The various materials used for stair nosing include wood, aluminum, rubber, brass, PVC and others. The selection of material and design depends on factors such as requirement and budget, type of use, stair type, etc.
