## Abstracts

?Stamped Battery Liquid Cold Plate is an efficient heat dissipation device manufactured by stamping process, which is used in the battery thermal management system. It consists of an upper and lower two layers of metal plates formed by stamping to form an internal flow path, and then brazed and sealed. When working, the coolant circulates in the flow channel to absorb the heat generated when the battery is working, so as to keep the battery temperature within the appropriate range and improve the battery performance and service life. Because of its excellent heat dissipation performance, efficient production efficiency and relatively low cost, it is widely used in new energy vehicles and energy storage systems and other fields.
