## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Stamped Fin Heatsinks competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The global stamped fin heatsink industry produces around 310 million units annually, with a total capacity of about 400 million units per year. Unit prices range from USD 0.8?4.2 per piece, depending on fin density, material, plating, and design complexity. The sector operates with an average gross margin of 23%, supported by scalable, high-volume stamping processes. Stamped fin heatsinks are a type of passive thermal management component made by stamping thin sheets of metal?typically aluminum or copper?into precisely shaped fins and then attaching them to a baseplate through methods such as soldering, brazing, or press-fitting. This stamping process enables high production efficiency, cost-effectiveness, and design flexibility for creating dense fin arrays that enhance surface area and airflow, making them ideal for dissipating heat from electronic components such as CPUs, power modules, LED drivers, and automotive electronics. The supply chain begins upstream with the production of rolled metal sheets through mining, refining, and smelting operations, followed by sheet rolling and surface treatment. Midstream, manufacturers use stamping presses and dies to produce fin structures in large volumes, which are then assembled into complete heatsink units. Downstream, stamped fin heatsinks are distributed through component suppliers and OEM channels to electronics manufacturers, lighting companies, data centers, and automotive system integrators, where they are integrated into finished products for thermal regulation.

The global Stamped Fin Heatsinks market size was estimated at USD 832.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40%

during the forecast period.
