## Abstracts

Standalone Coolant Distribution Units (CDUs) are independent cooling systems designed to provide efficient heat removal in data centers and other high-performance environments. Unlike integrated or in-row CDUs, standalone units are self-contained and can be installed separately from server racks, allowing for flexible placement and enhanced cooling performance across different sections of a facility.

**Fast Market Growth**In the current landscape dominated by AI-driven applications and dense chip architectures, liquid cooling has emerged as a pivotal technology. CDU, as a key part in liquid cooling system, will benefit from the prevalence of AI and high performance computing (HPC). The CDU market is expected to experience fast growth in the coming years.

**Continued Technology Innovation**CDU include liquid-to-liquid and liquid-to-air types. Though limited in cooling capability compared with liquid-to-liquid CDUs, liquid-to-air CDUs don't require water pipes, can be installed more easily, and take less space and lower initial cost than liquid-to-liquid CDUs. While although liquid-to-liquid CDUs hold the best cooling performance of all types. They require, among others, pipes to be installed to operate with a facility's water. More research and technology innovation will be put on liquid-to-liquid CDUs by CDU manufacturers to provide high performance CDU to data centers.
