Abstracts

Standard copper foil is mainly used for pressing paper-based phenolic resin copper-clad laminates and epoxy glass fibre cloth copper-clad panels (represented by ordinary FR-4 panels), for copper foil used in paper-based copper-clad panels, in order to improve the bonding strength of the copper foil and the substrate, after the copper foil is roughened and treated, a layer of special adhesive is also applied, the roughness of the roughened surface of this copper foil is relatively large, the thickness of the copper foil is generally 18 to 70 μm , and the various performance requirements Not very high. For the copper foil used for glass fibre cladding, in addition to the necessary roughening treatment, it is also subjected to heat-resistant treatment (e.g. alloying with nickel, cobalt, zinc, etc.), special high-temperature anti-oxidation treatment, with a high bonding strength to the base material and a heat-resistant temperature of around 200°C. It has 18 μm copper foil as its main body. The rapid development of the Standard Copper Foil market benefits from the continued growth of the electronics industry, especially in consumer electronics, automotive electronics and industrial applications. With the rise of emerging technologies such as 5G communications, the Internet of Things (IoT) and electric vehicles, the demand for Standard Copper Foil continues to rise. In particular, in the fields of high-density interconnection (HDI) and flexible circuit boards (FPC), the application of standard copper foil is becoming more and more extensive. In addition, the recovery of the global manufacturing industry and the demand for high-performance electronic devices have brought new development opportunities to the standard copper foil market. Although the Standard Copper Foil market has broad prospects, it also faces a series of risks. First, fluctuations in raw material prices will directly affect the production cost of copper foil, and then affect the market price. In addition, intensified market competition may lead to price wars and weaken the profit margins of enterprises. Secondly, increasingly stringent environmental regulations require enterprises to improve production processes and reduce pollution emissions, which may

cause enterprises to invest more resources to comply with regulations, thereby increasing operating risks. The downstream demand trend of Standard Copper Foil shows diversified development. The consumer electronics field is still the main source of demand, especially in products such as smartphones, tablets and wearable devices, the use of standard copper foil continues to increase. In addition, with the development of electric vehicles and renewable energy industries, the demand for high-performance copper foil has also increased significantly. In terms of industrial applications, the popularity of smart manufacturing and automated equipment has also driven the growth in demand for standard copper foil. In terms of regional economic conditions, the Asia-Pacific region remains the main growth driver of the Standard Copper Foil market, especially the strong strength of countries such as China and Japan in the field of electronic manufacturing, which has driven the development of the market. At the same time, the North American and European markets are also gradually recovering. With the promotion of technological innovation and green production concepts, the demand for high-performance standard copper foil in these regions will continue to rise. Overall, the recovery of the global economy and the development of emerging markets will create more opportunities for the standard copper foil market, prompting it to achieve sustainable growth in the future.

The global Standard Copper Foil market size was estimated at USD 7125.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
