Abstracts

Standard RAID mode hard disk array is a data storage technology that combines multiple independent hard disk drives (HDDs) or solid-state drives (SSDs) into a logical unit to provide data redundancy, increase performance, or both. RAID technology stores data on multiple hard disks through specific algorithms and configuration methods to achieve data reliability, availability and performance optimization. Standard RAID mode hard disk arrays are usually defined according to the RAID level used. Different RAID levels provide different balances between data protection, performance, and cost-effectiveness. The definition of standard RAID mode hard disk arrays covers these different RAID levels and their implementation methods, which together form the core of RAID technology. By selecting the appropriate RAID level and configuration method, the performance, reliability, and cost-effectiveness of the storage system can be optimized according to specific application requirements.

The global Standard Raid Mode Hard Disk Array market size was estimated at USD 19170.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
